INDEX TO BENET LABORATORIES TECHNICAL REPORTS - 1994

R. D. NEIFELD

AUGUST 1995

US ARMY ARMAMENT RESEARCH, DEVELOPMENT AND ENGINEERING CENTER

CLOSE COMBAT ARMAMENTS CENTER BENÉT LABORATORIES WATERVLIET, N.Y. 12189-4050

APPROVED FOR PUBLIC RELEASE; DISTRIBUTION UNLIMITED

19960221 084

DISCLAIMER

The findings in this report are not to be construed as an official Department of the Army position unless so designated by other authorized documents.

The use of trade name(s) and/or manufacturer(s) does not constitute an official indorsement or approval.

DESTRUCTION NOTICE

For classified documents, follow the procedures in DoD 5200.22-M, Industrial Security Manual, Section II-19 or DoD 5200.1-R, Information Security Program Regulation, Chapter IX.

For unclassified, limited documents, destroy by any method that will prevent disclosure of contents or reconstruction of the document.

For unclassified, unlimited documents, destroy when the report is no longer needed. Do not return it to the originator.

Form Approved
OMB No. 0704-0188

Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Warden, to Wa

REPORT NUMBER	TITLE	AUTHOR	DATE
ARCCB-TR-94001	Simpler J _{Ic} Test and Data Analysis Procedures for High Strength Steels	J.H. Underwood E.J. Troiano R.T. Abbott	Jan 94
ARCCB-TR-94002	Curvature-Induced Motions of 60-mm Guns - Phase II: Modelling	R.G. Gast	Jan 94
ARCCB-TR-94003	A Review of Weldment Failure Modes and Weldability Testing Methods	G. Young	Jan 94
ARCCB-CR-94004	A Review of Radial Forging Technology Including Preform Design for Process Optimization	J.P. Domblesky R. Shivpuri T. Altan C. Calderone (Benet POC)	Feb 94
ARCCB-TR-94005	Determination of Thermal Characteristics of 120-mm Tank Ammunition	K.A.L. Madulka E. Coppola J. Kenna	Feb 94
ARCCB-TR-94006	How the Brain Works	R. Scanlon M. Johnson	Feb 94
ARCCB-TR-94007	A Stress Factor Method for Perforated Muzzle Brake Design	G.C. Carofano M.R. Leach	Feb 94
ARCCB-TR-94008	Evaluation of the "Soft-Ride" Muzzle Reference System Collimators	E. Hyland	Mar 94
ARCCB-TR-94009	Design of a Fatigue-Resistant Press Used to Contain 3,000 Kips of End Load as a Result of High Pressure Cyclic Testing of Open-Ended Cylinders	M.J. Audino J.A. Kapp	Mar 94
ARCCB-TR-94010	Notch-Tip Damage and Translaminar Fracture Toughness Measurements from Carbon/Epoxy Laminates	J.H. Underwood M.T. Kortschot	Mar 94
ARCCB-TR-94011	Chromium/Molybdenum Alloy Plating - Part I: The Electrodeposition of Low Contraction Chromium/Molybdenum Alloys Using Unipolar (On/Off) Pulse Plating	M.D. Miller S. Langston	Mar 94

ARCCB-TR-94012	Calculations Via Successive Approximations of Stress and Strain Distribution in Thick-Walled Concentric Tubes Due to a Radial Temperature Gradient	B. Avitzur	Mar 94
ARCCB-TR-94013	Qualification of M256 Breechblock Weld Repair	D.A. Porter W.E. Marcoux A.E. Fish	Mar 94
ARCCB-TR-94014	Standards for Ordnance Materials; Dynamic Fracture and Environmental Cracking Applications	J.H. Underwood	Apr 94
ARCCB-TR-94015	Materials Analysis of 155-mm Improved Conventional Armament System (ICAS) Cannon, Tube Serial No. XP-1	K.E. Noll	Apr 94
ARCCB-TR-94016	155-mm Advanced Field Artillery System Liquid Propellant Prototype Cannon: Performance of the Weapon's Recoil system	R.G. Gast	Apr 94
ARCCB-TR-94017	Yield-Before-Break Fracture Mechanics Analysis of High Strength Steel Pressure Vessels	J.H. Underwood R.A. Farrara M.J. Audino	May 94
ARCCB-TR-94018	Experimental Heat Treatment of Beryllium Copper Alloy	K.E. Noll	May 94
ARCCB-TR-94019	Numerical Box-Counting and Correlation Integral Multifractal Analysis	L.V. Meisel M.A. Johnson	May 94
ARCCB-TR-94020	Automated Welding of Rotary Forge Hammers	J.R. Senick, Jr.	May 94
ARCCB-TR-94021	Servo Control Using Switches for Discrete Positional Feedback	R.L. Racicot	May 94
ARCCB-TR-94022	Metallurgical Evaluation of 25-mm M242 Bushmaster Gun Tubes, Serial Nos. 12373 and 12374	K.E. Noll J.R. Senick, Jr.	May 94
ARCCB-TR-94023	The Effects of Fatigue Loading Frequency on Fatigue Life of High- Strength Pressure Vessel Steels	R.R. Fujczak	Jun 94

ARCCB-TR-94024	Fatigue Life Tests for the Muzzle Reference System Collimator on the 120-mm M256 Cannon Tube	J.H. Underwood E. Troiano D.E. Leighton R.T. Abbott D. Crayon V.J. Olmstead R.A. Farrara	Jun 94
ARCCB-TR-94025	Stress Intensity Factor and Load-Line Displacement Expressions for the Round Bar Bend Specimen	J.H. Underwood	Jun 94
ARCCB-SP-94026	Index to Benet Laboratories Technical Reports - 1993	R.D. Neifeld	Jul 94
ARCCB-TR-94027	Automated Data Base of Mechanical and Physical Properties for Gun Steel	R.R. Fujczak G.L. Spencer J.H. Underwood E. Troiano	Jul 94
ARCCB-TR-94028	Perimeter-Yardstick Technique for Fracture Surface Fractal Analysis	G. Kendall P.J. Cote L.V. Meisel	Aug 94
ARCCB-TR-94029	Exponents in Lifetime and Power Spectral Density in Self-Organized Critical Systems	L.V. Meisel P.J. Cote	Aug 94
ARCCB-TR-94030	Failure Analysis of 120-mm Mortar Bushings and Firing Pins	K.E. Noll	Aug 94
ARCCB-TR-94031	Residual Stress Analysis in Swage Autofrettaged Thick-Walled Cylinders by Position-Sensitive X-ray Diffraction Techniques	S.L. Lee	Aug 94
ARCCB-TR-94032	Fracture Assessment of 155-mm M284 Breech Rings	E. Troiano J.H. Underwood R.T. Abbott	Aug 94
ARCCB-TR-94033	Adaptive Finite Element Method I: Solution Algorithm and Computational Examples	J.M. Coyle J.E. Flaherty	Aug 94
ARCCB-TR-94034	Adaptive Finite Element Method II: Error Estimation	J.M. Coyle J.E. Flaherty	Sep 94
ARCCB-TR-94035	Failure Analysis of 120-mm M256 Gun Tube, Serial No. 2416	K.E. Noll J.R. Senick, Jr.	Sep 94

ARCCB-TR-94036	Experimental Methods in Residual Stress Measurement Using a Position- Sensitive Single-Exposure Scintillation Detection System	S.L. Lee M. Doxbeck G.P. Capsimalis	Sep 94
ARCCB-TR-94037	Chromium Plating and Electropolishing Solution Analyses by Online X-ray Fluorescence Spectroscopy	S. Sopok	Sep 94
ARCCB-TR-94038	Fatigue Life Analysis and Tests for Thick-Walled Cylinders Including Effects of Overstrain and Axial Grooves	J.H. Underwood A.P. Parker	Sep 94
ARCCB-TR-94039	Monitor for Status Epilepticus Seizures	M. Johnson T. Simkins	Oct 94
ARCCB-MR-94040	Geometric Dimensioning and Tolerancing - 1946 to 1982 - The Differences in the Standards	D.H. Honsinger	Oct 94
ARCCB-TR-94041	A Fracture Mechanics Assessment of the 155-mm M284 Muzzle Brake	R.R. Fujczak J.A. Kapp	Oct 94
ARCCB-TR-94042	Materials Characterization of Hard Chromium and Low Contraction Chromium	K.E. Noll	Nov 94
ARCCB-TR-94043	Parallel Partitioning Strategies for the Adaptive Solution of Conservation Laws	K.D. Devine J.E. Flaherty R.M. Loy S.R. Wheat	Nov 94
ARCCB-TR-94044	Application of a Rapid Quench Thermomagnetic Analyzer to Austempered Ductile Iron	P.J. Cote T. Hickey M.D. Witherell	Nov 94
ARCCB-TR-94045	An HP-Adaptive Method in Space and Time for Parabolic Systems	J.E. Flaherty P.K. Moore	Dec 94
ARCCB-TR-94046	Stress Concentration, Stress Intensity, and Fatigue Crack Growth Along Evacuators of Pressurized, Autofrettaged Tubes	A.P. Parker J.H. Underwood	Dec 94
ARCCB-MR-94047	Report of Visiting Scientist Attachment of Dr. Anthony P. Parker of University of Northumbria, U.K. to Benet Laboratories July - August 1994	J.H. Underwood A.P. Parker	Dec 94

ARCCB-TR-94048	Spectral Characterization of Pulsed Ultrasound Using Neural Networks	M.A. Johnson M.A. Cipollo R.D. Scanlon	Dec 94
ARCCB-TR-94049	The Electrodeposition of Low Contraction Chromium/Molybdenum Alloys Using Pulse-Reverse Plating	M.D. Miller S. Langston	Dec 94

13. ABSTRACT (Maximum 200 wor	24		
13. ABSTRACT (Maximum 200 Work	as)		
An engineering study was anadysts	ad that aminus d tomical suclider and		1.3.1.2124
An engineering study was conducte	ed that reviewed typical weldment	allure modes and the types of	weldability test procedures currently
used to predict behavioral response	of a material that is to be welded.	n comparing the design effecti	veness of these tests, each has certain
inherent technical advantages/disad	vantages associated with it. The te	sts, if used appropriately, can	save untold time and costs associated
with poorly welded structures/comp	conents that fail in service premature	ely. They are divided into two	major categories, direct and indirect,
related to the test methodology or p	rocedure used to generate results. S	pecifically, direct tests make us	se of actual weldments, while indirect
tests utilize basic metallurgical prin	ciples to predict weld behavior. Fr	om this study, it should be app	parent that determining what the most
appropriate weldability test proced	ure is for obtaining useful results for	or a given situation is critical	to the success of that test.

ABSTRACT (Maximum 200 words) When thick-walled tubes are subjected to radial temperature gradients, cooler portions of the tubes impose constraints on the thermal expansion of hotter segments. (For example, in an internally heated tube, outer portions of the tube contain the expansion of the inner layer.) Constraint of the thermal expansion results in triaxial stress and strain distributions. A sequence of successive approximations has been used to calculate such stress and strain fields, while accounting for the mutual effect between the stress and strain fields, as described by the constitutive equations. Equilibrium is satisfied in all three mutually orthogonal coordinate directions, and compatibility (or conservation and continuity of matter) requirements are being complied with. Temperature dependence of the modulus of elasticity of the material is accounted for. The Mises' numbers field is computed to detect potential yielding. The total strain (thermal and elastic), which at the boundaries (inner and outer diameter surfaces and the axial ends of the tube) represents the dilation of the tubes, is also calculated. 15. DISTRIBUTION / AVAILABILITY STATEMENT Approved for public release; distribution unlimited 13. ABSTRACT (Maximum 200 words) Case study examples of fracture mechanics testing and analysis of Ni-Cr-Mo high strength steel cannon tubes are presented. The testing and analysis include significant plastic deformation accompanying fracture, which often occurs when high pressure is applied to high toughness steel pressure vessels. The analysis is based on a comparison of the size of the Irwin crack-tip plastic zone with the remaining ligament of the tube in the critical fatigue crack area that causes final failure. The results of the study show that the type of final failure can be predicted as either a relatively safe yield-before-break failure or a less safe running-crack type of failure for a variety of material, configuration, and loading conditions. 15. ABSTRACT (Maximum 200 words) A laboratory fatigue life test system was developed to obtain comparative life data for the muzzle reference system collimator on the 120-mm M256 cannon tube. A fatigue load was established which, although only indirectly shown to correspond to the service loading, is believed to provide valuable comparative life data for different means of fastening key components of the collimator. Fatigue lives were measured for various means of fastening, including different configurations of electron-beam welding and different sizes and types of high strength screws. Using the S-N fatigue life approach, consistent descriptions of the fatigue life of the muzzle reference system collimator could be made. 15. NUMBER OF PAGES 14. SUBJECT TERMS

Bak, Tang, and Weisenfeld (BTW) established that power-law frequency dependencies in the power spectral density (PSD) and size-effect modified power-law distributions of lifetimes are the fingerprints of self-organized critical systems. Jensen, Christensen, and Fogedby (JCF) clarified the ideas introduced by BTW and established the connection between the distribution of lifetimes and the PSD for the case of exponentially cutoff ("size-effect" modified) distributions of lifetimes. Here the (JCF) connection between the PSD and the distribution of lifetimes is established for sharp cutoff distributions, which supports the idea that the JCF connection holds for quite general "size-effect" modified lifetime distributions. The PSD may be expressed in terms of generalized hypergeometric functions in this case. A detailed discussion of the JCF connections is presented for a subset of values of the lifetime distribution exponent for which the generalized hypergeometric functions reduce to Fresnel integrals and sine and cosine integrals, which were the subject of a recent "Numerical Recipes" column. All calculations were performed in Mathematica.

DISTRIBUTION CODE 12a. DISTRIBUTION / AVAILABILITY STATEMENT Approved for public release; distribution unlimited. 13. ABSTRACT (Maximum 200 words) Experimental and theoretical investigations were made for swage autofrettaged partially plastic ASTM A723 steel cylinders with an outside diameter (OD) to inside diameter (ID) ratio of 2.75 and 74 percent overstrain. Residual stress radial distribution and angular stress distribution around the bore were analyzed using two position-sensitive x-ray diffraction stress analyzers. Theoretical calculation was made by implementing an interactive, iterative Lotus Works spreadsheet residual stress model on an IBM PC. The model was based on the classical solution to the elastic-plastic deformation problem of a symmetric thickwalled cylinder under internal pressure, including reverse yielding effect. Angular stress distribution data at the ID and OD indicated that non-axisymmetric deformation had occurred during yielding of the cylinders. Excellent agreement was obtained between experimental results and theoretical predictions, including the Bauschinger effect near the bore. By comparing experimental data with theoretical calculations for the 74 percent overstrained cylinders, the Bauschinger factor for the A723 steel was determined to be close to 0.5. Residual stress analysis for the entire cylinder is suggested in the future.

13. ABSTRACT (Maximum 200 work	ds)				
An adaptive finite element method is developed to solve initial boundary value problems for vector systems of parabolic partial differential equations in one space dimension and time. The differential equations are discretized in space using piecewise linear finite element approximations. Superconvergence properties and quadratic polynomials are used to derive a computationally inexpensive approximation to the spatial component of the error. This technique is coupled with time integration schemes of successively higher orders to obtain an approximation of the temporal and total discretization errors. These approximate errors are used to control an adaptive mesh refinement strategy. Refinement is performed in space, time, or both space and time depending on the dominant component of the error estimate. A computer code coupling this refinement strategy and stable mesh movement has been written and applied to a number of problems. These computations confirm that proper mesh movement can reduce the computational efforts associated with mesh refinement.

13. ABSTRACT (Maximum 200 work	ds)				
A failure analysis was performed on a 120-mm M256 gun tube, Serial No. 2416. The gun tube experienced a muzzle end failure while firing kinetic energy training ammunition. The analysis included visual examination, mechanical property determination, scanning electron microscopy, metallographic examination, and chemical composition determination. Based on the analysis, the gun tube material met or exceeded all drawing requirements. No evidence of pre-existing flaws was found on the fracture surface. The most probable cause for the failure was a bore obstruction that was present during firing.

In the Denver D-1000-A single-exposure position-sensitive scintillation detection (PSSD) system, surface residual stress measurement in any chosen direction is based on crystalline plane spacings determined in two directions normal to the surface made simultaneously in a single psi tilt. This technical allows fast, noncontacting, and nondestructive biaxial stress analysis. In this report, system performance is characterized by studying the noise, gain, and diffraction peak profiles as a function of diode array element. A four-point bend experiment was performed to determine the elastic constant of the 211 plane of body-centered cubic martensitic steel. Residual stress measurements were performed in several steel specimens and compared to measurements made on a similar system at Pennsylvania State University. Local software development allowed the single-exposure PSSD to run in a multiple-exposure mode for improved accuracy in biaxial stress analysis.

13. ABSTRACT (Maximum 200 wor	ds)					
Two increasingly important issues for the chemical processing industry are product quality and productivity. Traditionally, offline chemical analysis has been used to monitor both. The main disadvantage of offline analysis is the loss of time due to sampling, bringing samples to a lab, and waiting for results. Obvious efficiencies can be realized by continuous online chemical monitoring. The initial investment is high, but the return on investment can be very efficient process performance. X-ray fluorescence spectroscopy (online and offline) is investigated and evaluated as a means to quantitatively analyze metal finishing solutions such as actual chromium plating and electroplating solutions for chromium, sulfur, phosphorus, and iron. The identical experiment was conducted at three different manufacturers of this type of instrument, and included calibration, standardization, and analysis. Although this work has a specific objective related to chromium plating and electropolishing liquid samples, much information is related to and provided for other types of samples. Chemical analysis by x-ray fluorescence spectroscopy is nondestructive, applicable to multiple process streams (liquid or solid), and requires no dilutions. In addition, calibration, standardization, and maintenance are minimal. For the specific metal finishing applications discussed, the resultant data do not suggest that this online monitoring technique is useful at this time, but future work may show this technique to be practical.

This report describes the sensor technology and associated electronics of a monitor designed to detect the onset of a seizure disorder called status epilepticus. It is a condition that affects approximately 3 to 5 percent of those individuals suffering from epilepsy. This form of epilepsy does not follow the typical cycle of start-peak-end. The convulsions continue until medically interrupted and are life-threatening. The mortality rate is high without prompt medical treatment at a suitable facility. The report describes the details of a monitor design that provides an inexpensive solution to the needs of those responsible for the care of individuals afflicted with this disorder. The monitor has been designed as a cooperative research and development effort involving the United States Army Armament Research, Development, and Engineering Center's Benet Laboratories (Benet) and the Cerebral Palsy Center for the Disabled (Center), in association with the Department of Neurology at Albany Medical College (AMC). Benet has delivered a working prototype of the device for field testing, in collaboration with AMC. The Center has identified several children in need of special monitoring and has agreed to pursue commercialization of the device.

13. ABSTRACT (Maximum 200 words)			
A stress analysis has been conduct	ed on a pressurized, fully or	partially autofrettaged of	cylinder with a small diameter evacuator
hale penetrating radially through t	he wall. Pressure was appli	ed on the inside diamete	r (ID) of the tube, and all or part of this
pressure was applied on the evacu	lator hole surfaces. Total l	noop stress concentration	ns have been determined for a range of
radial locations along the evacua	tor and stress intensity fac	tors have been determin	ned along a crack emanating from the
evacuator hole. Fatigue crack gro	wth rates, and hence crack	profiles, were predicted	at each of the radial locations. These
predictions indicate that the crit	ical location for the crack	m a non-autofrettaged	tube is at the ID, whereas in a fully
autofrettaged tube, it is located	approximately hallway thro	bee a limited effect was	Stress ratio $\sigma_{min}/\sigma_{max}$ has a significant
influence on crack shape in autol	rettaged tubes, nowever, it	has a innited effect upo	on lifetime. The effect of axial residua
stresses upon fatigue lifetime due	to the autometrage process	nas been described and a	an insignificant reduction in lifetime was
a result of such stresses. Finally, th	e predicted promes are com	pared with experimental	observations of fatigue crack evacuators agreement has been observed in both
	edicted and actual metime	s is presented. Good	agreement has been deserved in the
comparisons.

A novel nondestructive evaluation technique that uses the spectral signature of a pulsed ultrasound signal to identify metals had recently been abandoned because of the difficulty in interpreting the results. Traditional analysis is inconvenient to apply to this type of problem because of the complicated, noisy, and incomplete nature of the data. Neural networks provide a radically different approach to computation. These massively parallel systems provide a mechanism to extract pertinent information from input data while maintaining a high degree of fault tolerance. This report discusses design of a neural network system capable of accepting data from nondestructive test equipment and producing output relative to the quality of the sample being tested.
